Business Intelligence

Maximize the Value of Your Data Assets Through Business Intelligence

Overview

SE BI (Business Intelligence) is the ultimate solution to optimize the company's knowledge base and enhance strategic decision-making in a fast, reliable and complete approach.

SE BI is an analysis environment which allows users to easily and safely explore their data warehouses and to considerably improve their managerial analytical vision.

SE BI enables crisscrossing large amounts of data by means of an intuitive interface. Allowing corporate

information to be easily analyzed through different viewpoints.

The system's consistent and robust architecture features OLAP (Online Analytical Processing) resources. Besides this, the BI data cubes are flexible and interlinked, which provides the perfect tool for managing the company's knowledge.
