

Terex Roadbuilding invests in risk management and control measure development

The need to minimize all types of threats to datacenter security as well as explore different contingency procedures and tactical measures for possible incidences prompted Terex Roadbuilding Latin America to invest efforts in a risk management project. TI Safe, a partner specialized in risk management consulting, and SoftExpert were contracted to conduct a complete analysis of the organization's risk conditions in all areas using the SoftExpert solution. According to Eduardo Santa Helena, the IT Manager at Terex, the initial diagnosis indicated the company's real situation. A later stage involved the identification of the weak points through interviews with key users. "We were looking for a risk management solution that would give us improved control over our environment as a whole. We decided to initiate this work focusing on the Information Technology area and, later, we want to extend this into the other departments at Terex. The in-depth analysis by the TI Safe specialists allowed us to develop the control measures necessary for reducing the percentage of exposure to incidents", said Santa Helena.

The TI Safe consulting service identified alternatives for increasing the use of SoftExpert solutions for risk management during different organizational activities. "The solution allowed us to maintain an organizational alignment at the strategic, tactical and operational levels, while providing us with more secure controls of the essential processes related to the different activities", explained Santa Helena. He further stated that the project minimizes current threats by applying metrics and controls, audits and corrective actions. "This risk management model makes decision making process more efficient and secure and is aligned with the Terex IT Strategic Planning and [general] Strategic Planning actions", he said.

About the Terex Group

The Terex Group is a U.S. conglomerate that gathers over 50 companies in several different countries. It is the world's third largest supplier of equipment for roadbuilding and paving. In addition to the Roadbuilding sector, Terex also operates in the areas of Construction, Cranes, Aerial Work Platforms, Mining, Utilities, Light Construction, Aggregates and Recycling. All of the group's companies are involved in a unified planning process that defines operating strategies, investments and visual identity.
